

Nursery news

Experiments

We are continuing experimenting with different ingredients to see how they change. We are learning about colour mixing, floating, and sinking and how textures change when mixed. This is developing our fine motor skills and use of mathematical language.

Sensory Play

Our Strong Starts have been using learning about their senses through a variety of play experiences. We have introduced new smells and textures into their everyday play.

Sgoil-àraich

We have been out and about collecting different types of seeds. We found some acorns which the children wanted to plant - after we tested to see if they were viable (float test). We have just started talking about what animals live in the woods and what they eat during the winter.

Other Information

During messy play activities in nursery, we encourage children to wear aprons, but we do ask that children come to nursery dressed in suitable clothing that might get messy.

If your child is in nappies, can we ask that they have both nappies and wipes in their bags as we don't keep these in the nursery.
